MUST BE UP TO THE STANDARD. Ties Bought for Railway Construction on the Isthmus. Regarding a dispatch from Panama in

which it was said much inferior lumber and railroad ties are being shipped to the isthmus for use in connection with the construction of the canal, it was said at the isthmian canal commission that all the requisitions for lumber for the account of the Panama canal commission are made by Chief Engineer Wallace, and are countersigned by General Davis. More than 2,000, 000 feet of pine and cypress lumber, ties and piles have been ordered. The steamer Clifford carried 300,000 or more feet from New Orleans to Colon, including 10,000 cypress ties coated with creosote. Of these Rear Admiral Walker says:
"These are durable enough for the pur-

pose we require—for the construction of tracks and switches. We cannot get lignum vitae ties in great number. Besides, lignum vitae ties cannot be moved, as it will be necessary to move these. Before you can drive a spike in a lignum vitae tie you must bore a hole and then it is difficult

Dominick I. Murphy, secretary of the commission, said the material was bought by Alfred Anderson, purchasing agent of the Panama railroad, who made a trip to New Orleans, Natchez and Mobile for the

The requisitions for the rest of the two million feet of lumber are to be filled by centract bids, which will be opened October 6, when Chief Engineer Wallace will be here. Mr. Murphy said all the ties now in Panama were sent from Louisiana and Texas, and were subject to inspection, both at the shipping point and at the destina-tion. The specifications call for the same ties as are used on the Illinois Central railroad, and if they are not up to the standard Chief Ergineer Wallace will not accept them, as he made the specifications himself. As for the seventy-five thousand railroad ties said to have been taken to Colon from New Orleans, Mr. Murphy said that such a number had not been purchased, and that the amount purchased was not more than one-third of it.
